Career Objective

Full-stack software engineer experienced in building production-grade applications using Nextjs, Nodejs, and PostgreSQL, with strong skills in scalable backend design and query optimization. Solved 700+ DSA problems (LeetCode top 30%), demonstrating solid problem-solving ability. Seeking an SDE-1 role to build high-impact features and scalable systems.

Academic Details

• Pranveer Singh Institute of Technology	Kanpur
Bachelor of Technology in Computer Science and Engineering [Percentage till semester 5: 73.83]	2023 - Present
• Radha Krishna Memorial Education Centre	Kanpur
Senior Secondary Education [Percentage: 74.4]	2022
• Radha Krishna Memorial Education Centre	Kanpur
Secondary Education [Percentage: 85]	2020

Technical Skills

- **Programming Languages:** C++, JavaScript, TypeScript
- **Frontend Technologies:** Reactjs, Nextjs, Tailwind CSS
- **Backend Technologies:** Nodejs, Expressjs, Rest APIs
- **Databases & ORM:** PostgreSQL, Prisma, MongoDB
- **Authentication:** NextAuth, OAuth, JWT
- **Tools & DevOps:** Git, GitHub, Docker, Postman, VS Code
- **Concepts:** System Design, Scalability, Performance Optimization

Projects

- Consoled** - Terminal UI Component Library (Ongoing)
- Technologies: Go, ANSI Escape Codes, Event Systems, Layout Engines
 - Description:
 - Building a component-based terminal **UI framework** in Go, inspired by modern UI architectures like React.

- Interview Platform** - Full-Stack Web Application (Completed)
- Technologies: Nextjs, TypeScript, Nodejs, PostgreSQL, Prisma, WebSockets, NextAuth, Monaco Editor
 - Description:
 - Engineered a **scalable real-time** interview platform using **WebSockets**, enabling **low-latency** collaborative coding experiences.
 - Integrated **Monaco Editor** with a **Docker-based** sandbox to support secure, in-browser code execution and evaluation.
 - Implemented authentication using **NextAuth with Google OAuth** and designed an optimized PostgreSQL schema for efficient data management and real-time updates.

- Reviewboxd** - Media Progress Tracking Platform (Completed)
- Technologies: Nextjs, TypeScript, Nodejs, PostgreSQL, Prisma, Tailwind CSS, NextAuth
 - Description:
 - **Designed 6-table PostgreSQL schema with normalized relationships** supporting 500+ shows and 10,000+ episode state transitions; implemented strategic indexing to reduce query latency from **400ms to <50ms**
 - **Built RESTful API layer** with proper request validation, error handling, and connection pooling; achieved **sub-100ms response times** for concurrent show/episode lookups across normalized dataset
 - **Shipped SSR-optimized Nextjs frontend** with NextAuth Google OAuth integration; reduced initial page load from **4.2s to 1.1s**

Achievements

- Solved **700+ algorithmic problems** across LeetCode, Codeforces, and CodeChef
- Among **top 30%** coders in **LeetCode** [Max Rating: **1565**]
- 1-Star coder in **CodeChef** [Max Rating: **1351**]
- Max Rating of **919** in **Codeforces Rating**
- Proficient in advanced DSA: Trees, Dynamic Programming, Graph Algorithms
